[opensci small-binder] Notebook nodegroups are not available

Status: Reviewed

Overview

No comments added

What Happened

The opensci small-binder cluster didn't have any notebook nodegroups available, so users could not spawn servers.

Resolution

Deleting and recreating the nodepools fixed it.

Where we got lucky

We had people working so close to the winter PTO break.

What Went Well?

The fix was a quick one.

What Didn't Go So Well?

Because this happened during winter time off this meant that we fixed the issue for this cluster, but didn't go to the bottom of the problem.

The problem was that we reached the maximum number of nodegroups per clustee. This caused another outage later on.

scale-ups aren't triggering

1:06 PM Engineer notices missing node groups

Georgiana Dolocan #opensci-small-binder-missing-nb-nodegroups-dec2025
and looking at the nodegroups for small-binder I can only see dask ones for some reason.

1:06 PM Engineer recreates the nodegroups

Georgiana Dolocan #opensci-small-binder-missing-nb-nodegroups-dec2025
I'll try recreating

1:28 PM Problem is resolved
